

Assignment Title: Multi-App Django Project Data Add & Data Retrieve System

Task Description:

Create a Django project named DataManagementSystem.

Requirements:

1. Create 5 Django Apps:
 - App 1: StudentApp
 - App 2: EmployeeApp
 - App 3: LibraryApp
 - App 4: HospitalApp
 - App 5: ProductApp
2. Implement the following functionalities for every model:
 - Add Data (Create)
 - Display All Data (Retrieve)
3. Use Django Templates for forms and data display.
4. Use Bootstrap for better UI design.
5. Create proper URL routing for each model.

Model List and Fields

App 1: StudentApp

Model : Student

student_id, first_name, last_name, email, phone, gender, date_of_birth, department, address, admission_date

App 2: EmployeeApp

Model: Employee

first_name, last_name, email, phone, designation, department, salary, joining_date, address

App 3: LibraryApp

Model: Book

Title, author, publisher, isbn, category, publication_year, price

HospitalApp

Model: Patient

first_name, age, gender(male, female), blood_group, phone, address, admission_date

App 5: ProductApp

Model : Product

product_name, category, brand, price, quantity, manufacture_date, expiry_date

Expected Output

For every model:

1. A form to insert data into the database.
2. A page to retrieve and display all records from the database.
3. Separate URL patterns.
4. Separate templates.
5. Separate view file for each model.
